COURSEWORK

UNDERGRADUATE

- DBMS
- Operating Systems
- Web Technology
- OOPS
- Data Structures, Algorithms

SKILLS

PROFICIENT

- C/C++
- Data Structures, Algorithms
- Problem Solving

HANDS-ON

- HTML
- CSS
- Javascript
- React.js
- React-Redux
- Node.js
- Express.js
- Web Socket
- JAVA
- WebRTC
- C++
- MongoDB
- Mongoose
- Docker
- Git
- Firebase
- Golang
- Redis
- Postgress

WORK EXPERIENCE

Kazam EV | BENGALURU | SDE-BACKEND

MARCH 2023 - PRESENT

- Automated key **data processing tasks** using **watchdogs** and **cronjobs**, ensuring system reliability and timely operations.
- Led the comprehensive implementation of a **dynamic tariff system** for EV charging, integrating intricate elements like **time-of-day pricing**, **penalty mechanisms**, and **varied tariff structures**. This strategic initiative not only elevated user experience but also drove a substantial **10% surge in CPO revenue**, highlighting a nuanced understanding of revenue management within the evolving EV charging ecosystem.
- Enhanced the **revenue management system** backend, streamlining transactions **from drivers to stakeholders**, contributing to **higher revenue** and **operational efficiency**.
- Designed and implemented a scalable **Coupon Management System** for EV charging applications, enabling targeted campaigns, referral programs, and location-based promotions. Developed features such as coupon creation, validation, usage limits, user segmentation, and real-time tracking, which improved **user engagement**, **customer retention**, and overall **revenue growth**.
- Developed an end-to-end **Subscription Management System** for a battery-swapping platform, supporting flexible usage-based plans, billing workflows, subscription lifecycle management, and usage tracking. Integrated real-time consumption analytics and billing transparency features, improving **user experience**, operational efficiency, and supporting recurring revenue generation.
- **Tech Stack:** Typescript, Node.js, Web Sockets, Golang, React, SvelteKit, TailwindCSS, Mongodb, Postgress, Redis, Kafka, Docker.

Markopolo.ai | U.S.A | BACKEND DEVELOPER INTERN ☞

JUNE 2022 - SEPTEMBER 2022

- Worked with various **ad integration**(Facebook , Google , TikTok , etc.) APIs.
- Worked on code migration from **Google Client Library** to **Google Ads Rest Interface**.
- Implemented different levels of hierarchy such as **Ad Campaigns**, **Adgroups**, **ads**, etc.
- Wrote technical documentation to support the Backend team.
- **Tech Stack:** Typescript, Node.js, Web Sockets, Mongodb.

MAXTAP | BENGALURU | SOFTWARE ENGINEER INTERN ☞

FEB 2022 - APRIL 2022

- Implemented **in-feed video ads** for internal testing resulting in better product delivery.
- Successfully established **dashboard for content curators** for human filtering.
- Collaborated with developers, designers and other cross-functional teams.
- Provided input to leaders about the future development of new features.
- **Tech Stack:** Typescript, Node.js, Web Sockets, Mongodb, React.js.

PROJECTS

CRACKIT ☞

- Build an **Video Chat Application** for taking interviews with an **inbuilt online IDE** for running **JAVA , C++ , PYTHON** programs .
- It also has **inbuilt messaging** feature which is achieved by using **RTCDataChannel** for low latency messaging between the peers.
- **ReactJS** is used for **frontend** and **NodeJs** in the **backend**, for establishing **peer to peer** connection **WebRTC** and **socket.io** are used.

ONLINE IDE ☞

- An **online IDE** for running **JAVA , C++ , PYTHON** programs.
- For **frontend** part **ReactJS** is used and in **backend NodeJS** in which **child-process exec()** is used to execute **shell commands** for compiling codes.
- **Docker** is used to make necessary compilers available to the backend.

CRYPTO PRICE TRACKER ☞

- Build a website to show various crypto coins' current market price and show **BTC charts(Chart.js)** to understand more about the current market price of that crypto coin.
- Use **ReactJs** for frontend and **Axios** to retrieve data from an API.
- Implemented the **React Router DOM** to allow nested **RESTful** routing.
